

PART A. Selection of a laboratory for testing:

- The BVD Implementation Group has designated the following laboratories to test samples for BVD virus and/or antibody as part of the national BVD Eradication Programme.
- Herdowners should be aware that not all laboratories may be in a position to test all tag types and should therefore take this into account when deciding to which laboratory they will submit samples (see the table overleaf for further information).
- You should contact the laboratories directly to ensure that testing is carried out at the best price.

Name of laboratory	Address	Website	Contact
Agri Diagnostics	Dunrinc, Killarney, Co. Kerry	www.southernscientificireland.com	Marta Gryszka 064 6633922 info@agridiagnostics.ie

Part B. Selection of a laboratory for testing of blood and milk samples

- A number of laboratories have also been designated to provide additional BVD testing on blood and milk samples for both BVD virus and antibodies. Details of all designated laboratories, including their accreditation and the range of tests offered, are provided in the table overleaf. If you wish to have the results of blood or milk testing for BVD virus (or antibodies) transferred to the ICBF database for use in the programme, then it is essential that you select a laboratory from this table that is designated to perform the appropriate test on your chosen sample type(s).

While every reasonable effort has made to ensure the accuracy of this information at the time of publishing, no representation or guarantee is given, whether by AHI, its employees, subcontractors, agents, distributors or any other person, that the contents are comprehensive, up to date, or free from error or omissions. AHI is not responsible for the content of external sites.

No biological test is 100% accurate. If an inaccurate result is suspected, the animal should be isolated and re-tested.

All designated laboratories are independently accredited for BVD testing and the test methods used (ELISA or RT-PCR) will, in the great majority of cases, accurately detect the presence or absence of virus in tissue and blood samples when submitted and tested correctly. However, results relate only to the sample as received by the laboratory and, whilst laboratories warrant that their tests will meet their applicable declared specifications, the laboratories make no other warranty, expressed or implied and accept no responsibility or liability in respect of false results which are within the limits of the declared specifications of the tests offered. No representation or warranty is given by AHI, ICBF, the Technical Working Group, the Implementation Group or any member, employee or other person connected with any of the foregoing bodies as to the accuracy of any BVD test methods or test results. Neither AHI, ICBF, the Technical Working Group, the Implementation Group nor any member, employee or other person connected with any of the foregoing bodies shall have any liability or responsibility in respect of any laboratory or the accuracy of any test methods, test results or reports produced by any laboratory.
