

# Accessing AHI dashboards

Michelle McGrath, Assistant Programme Manager

**A** lot of useful information is available through the ICBF website including information and programme data for your herd from our various AHI programmes. These include BVD, Johne's Disease and Beef HealthCheck with more under development specifically relating to the CellCheck and Pig HealthCheck programmes. For those of you who are uncomfortable in the area of technology, this data is surprisingly easy to access on ICBF. To assist you with we have several useful guides and videos on our website explaining how to access this data on ICBF [click here](#).

To gain access to the dashboards, log in to your ICBF account using your username, which is your Herd number or a unique Identifier and your password. If you have forgotten your password, contact ICBF by either, email to [query@icbf.com](mailto:query@icbf.com) or phone 023 882 0452 [9am – 5.30pm]. Once you have logged in to the ICBF website, you will see a menu bar running along the top of the screen. To access the various dashboards, select **SERVICES** then select **AHI ANIMAL HEALTH** from the dropdown menu. Here you will see the various AHI programmes that are available. Did you know it is also possible to share access to your dashboards with your veterinary practitioner? This access will benefit you in your herd health monitoring and planning.

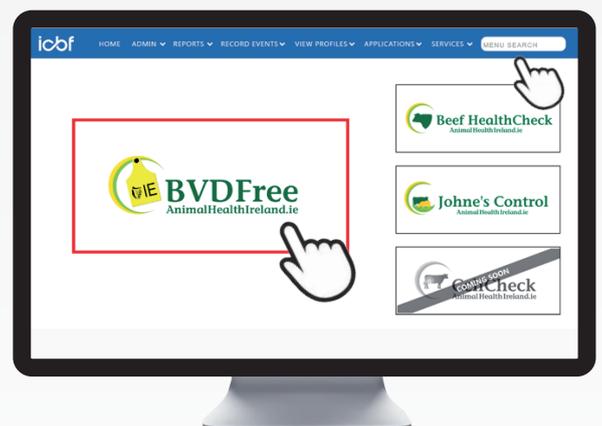

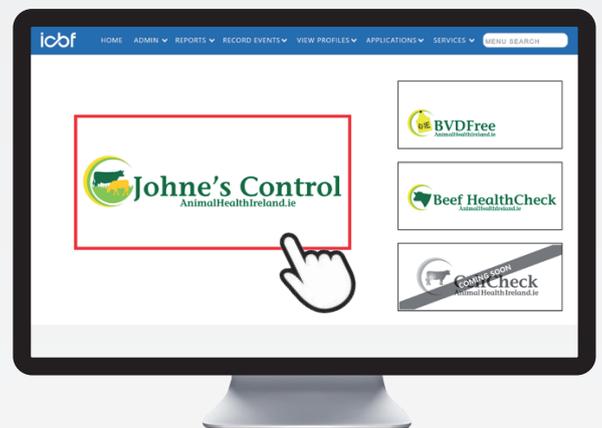

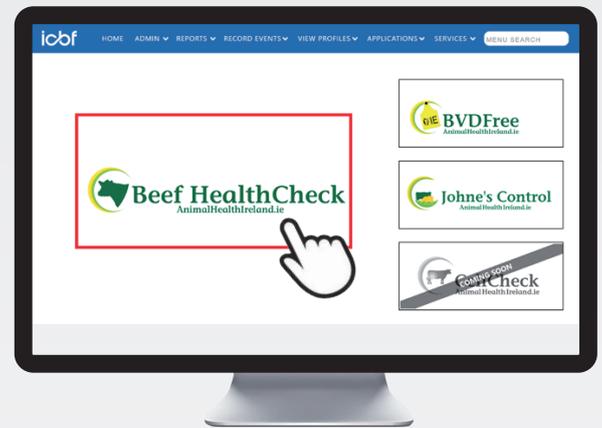

Animal Health Ireland, 2-5 The Archways, Carrick-on-Shannon, Co. Leitrim, N41 WN27  
Phone 071 9671928 | Email [ahi@animalhealthireland.ie](mailto:ahi@animalhealthireland.ie) | Website [www.animalhealthireland.ie](http://www.animalhealthireland.ie)

Beginning with the Beef HealthCheck dashboard, this dashboard has summary graphs of both liver and lung scores from all cattle slaughtered from your herd in the current year. Individual animal information is also available. Where evidence of liver or lung damage is found, you are advised to contact your veterinary practitioner to discuss future parasite control plans. For further information about the Beef HealthCheck programme [click here](#).

The Johne's disease dashboard allows herdowners who are registered in the Irish Johne's Control Programme (IJCP) to access and use their herd's Johne's disease screens. The Johne's disease screen presents the herd's history for Johne's disease (JD) testing and Veterinary Risk Assessment Management Plans (VRAMPs). This information is vital for monitoring and planning the programme activities while the test results for all animals tested will assist you in the management and control of the disease in your herd. For more information about the IJCP [click here](#).

The final dashboard that is currently available to you is the BVD dashboard which provides access to all your BVD test results including, a summary of the entire herd by status and an archive of all letters issued to you over the course of the BVD eradication programme. The BVD dashboard also provides you with a series of additional options. These are particularly useful for herd investigations that are carried out by a veterinary practitioner, following BVD positive test results. They include purchase history, contiguous herds (details of the total number of herds which the infected herd shared a common boundary with), and an investigate function (useful to determine when infection occurs). This screen gives access to a family tree function showing the ancestors or descendants of a given animal by sex, date of birth, date of death, and status.

This dashboard is also easily accessible on your mobile phone which is convenient, especially if you need to check BVD results quickly. For further information [click here](#) or contact the BVD Helpdesk on 076 1064590.

It is hoped that both the CellCheck and the Pig HealthCheck dashboards will be available for use in the next two months.

While many farmers have given permission for their veterinary practitioner to access their data on ICBF, for those who still have to give access, we would strongly encourage you to do so. This information allows your veterinary practitioner to assist and work with you on the management of your herd health.

To give permission, you select **ADMIN** in the tool bar. From the drop-down list, select **CHANGE DATA PERMISSIONS**. The webpage that appears offers you the option to give permissions to several service providers including **VETERINARY SERVICE**. Click on **VETERINARY SERVICE** and select your veterinary practice from the drop-down list. If for whatever reason the practice name is not on the list, please contact ICBF. Alternatively, your veterinary practitioner can print an authorisation form from the ICBF website for you to sign.
